

INDUSTRIAL PRETREATMENT PROGRAM ANNUAL REPORT 2021

CITY OF GLOUCESTER
DEPARTMENT OF PUBLIC WORKS
INDUSTRIAL PRETREATMENT PROGRAM
GLOUCESTER WATER POLLUTION CONTROL FACILITY
50 ESSEX AVENUE
GLOUCESTER, MA 01930
TEL. (978) 281-3741
FAX (978) 282-0182

This report is submitted in accordance with the requirements of the City of Gloucester's (City) NPDES Permit # MA0100625 and provides information on the status of the industrial pretreatment program (Program) and activities conducted during the 2021 calendar year.

The report lists the permitted industrial users and their compliance status and summarises enforcement actions, inspections, site visits, and City monitoring activities. Since 2009, the Industrial Pretreatment Program (Program) has been managed by the City's contract operator of the Water Pollution Control Facility (WPCF), Veolia North America.

1. Industrial Users by Category

The Program currently has one (1) Categorical Industrial User, two (2) Significant Industrial Users (SIU), and eleven (11) Industrial Users (IU). The pretreatment coordinator visits each Industrial User twice per year, one of which includes a sampling event independent of the IU self monitoring. SIUs submit self monitoring reports (SMR) on a monthly basis. IUs self monitor biannually.

Three new businesses were added during 2021, Cape Ann Lanes Brewery, Captain Vince Lobster, and Ocean Breeze Cultivators. Upon introduction to the program, the IPP Program Coordinator explained the requirements, the average discharge limits based on flows, and forwarded a copy of the Industrial User Permit Application to the business.

The following table summarises this information.

	Name	Address	Status	Requirements				Permit #	2021 Loadings		Inspect ion Date	Sampli ng Date
				BOD, lbs/day	TSS, lbs/day	O/G, mg/L	TTO, mg/L		BOD, lbs/day	TSS, lbs/day

MAHL									1903	770		

- 1- Facility has approved Solvent Management Plan
- 2- Business was closed before sampling was able to be performed
- 3- Business was not open for production prior to the end of the year

Periodic monitoring reporting requirements

Self-monitoring reports are submitted to the Coordinator by permitted industrial users. Monthly submissions are required by SIU's and CIU's while non-SIU's report bi-annually.

With the exception of production-based limitations, all IU's were sampled by the City in conjunction with a separate survey and facility inspection with the specified authorised representatives.

During these annual inspections, an inventory was taken of any and all substances used in the production process along with an explanation of any process and chemical changes that were either enacted or proposed since the last inspection.

The status of the following are reviewed during annual inspections:

- Operation Logs
- Standard Operating Procedures (SOP's)
- Operations and Maintenance Manuals
- Instrument Calibration Records
- Environmental Control Permits
- SDS Sheets
- Status of Pretreatment System Bypass Seals
- Spill Control Plans
- Slug Control Plans
- Emergency Response Plans
- Water Usage Discharged
- Hauled Waste
- Events and or Violations; i.e. Accidental Spills

2. Summary of Compliance and Enforcement Activities

There were no instances of SNC for any of the Industrial Users during evaluation periods in 2021.

There were no violations or enforcement actions taken during 2021.

3. Significantly Violating Industries - Reported to Local Newspapers

There were no instances of violations to be published during 2021.

4. Program Description

Staffing

Since 2009, the Industrial Pretreatment Program (Program) has been managed by the City's contract operator of the Water Pollution Control Facility (WPCF), Veolia North America.

Pretreatment Coordinator:

The Veolia Pretreatment Coordinator (Coordinator) administers the day-to-day functions of the Program. As of May 2019, the Industrial Pretreatment Coordinator for the City of Gloucester is David Mondello.

Laboratory Functions:

One state-certified laboratory was used during 2021 for sampling and analyses of industrial wastewater discharges on behalf of the City through Veolia North America:

New England Testing Laboratory (NET Labs)
59 Greenhill St
West Warwick, RI 02893

Ordinances

The Gloucester City Council passed the Fats, Oils and Grease (FOG) ordinance in July 2012, giving legal authority to the FOG program, which began on July 5, 2011 under the oversight of the City's Water Compliance Office and administered by the WPCF contract operator, Veolia North America. Since the program's inception, approximately 124 Food Service Establishments (FSEs) have remained permitted under the FOG program. (See Appendix H)

During the first half of 2021, the Coordinator successfully completed the first round of inspections for all FSE's permitted under the FOG program. Veolia had previously established an online training package accessed via the city website as an option for re-permitted FSEs to reaffirm program responsibilities and waive the \$50 permit fee. The webinar, created in 2016, has been utilised as a form of training for newly permitted FSE's and a means of waiving the permit fee upon completion. Approximately 5 newly permitted FSEs successfully completed the webinar in 2021. The second round of inspections for 2021 were completed by December; overall, the majority of permitted FSE's were in total compliance and were receptive when changes needed to be implemented. Due to the pandemic, most of the permits that expired in June were extended until December 31, 2020. New permits were issued in January 2021.

On July 14, 2017 the effluent limitations guidelines and standards for the dental category were finalised and published within the Federal Register by the Environmental Protection Agency. With the passing of the final rule, dental offices must install amalgam separators if not already present and utilise two best management practises suggested by the American Dental Association. Existing Dental Offices had until July 14, 2020 to comply with the new rule standards; any new dental sources established after the effective date are required to comply immediately. All dental dischargers subject to the new rule are to submit a One-Time Compliance Report providing information on the facility and its operations as well as certification that the new rule standards have been implemented. Dental Offices are listed in Appendix I.

As of 2022, the City has requested that Veolia Water's IPP Coordinator perform 86 sewer manhole inspections & evaluations for FOG in problematic areas quarterly.

5. Summary of Analytical Results

The WPCF influent and effluent data for conventional pollutants is presented in Appendix A.

The metas sampling results from 2021 are presented in Appendix B. In 2021, the effluent concentration of Copper exceeded both the chronic and acute Water Quality Standard during all 4 sampling events.. In the 4th Quarter sampling, Zinc exceeded the chronic water quality standard.

The 2021 Sludge Data, which includes nutrients and metals, is in Appendix C.

The Average loadings from each industrial user is in Appendix D. No Users exceeded their allocations in 2021.

The 2021 Bioassay results are in Appendix E. It is the opinion of the WPCF staff that the continued lower survivability for *Menidia* is a result of high ammonia concentrations in the plant effluent due to the WPCF providing primary treatment only.

6. Interference and Pass-throughs

The December monthly TPH average of 5.3 at the WPCF exceeded the permit limit of 5.0. During the month, the wastewater plant maintenance staff detected petroleum odors in the septage receiving area shortly after a septage truck was dumped. The company was contacted and reported picking up a load from Sudbay Auto, a local car wash.

The IPP Coordinator was dispatched to the site and conducted an inspection of the facility and collected a sample. The sample was found to have

“non-detect” levels of TPH. The source of the TPH remains unknown at this time. However, Sudbay has now been added to the list of Industries to be inspected and sampled on a regular basis. As the investigation continues, this business may be added to the pretreatment program.

7. Efforts Taken to Reduce Significant Violations by Significant Industrial Users

When a violation is reported or found, the severity of the violation is determined. A facility receives either a telephone call, e-mail or a letter for a minor violation. They receive a notice of violation (NOV) for a more serious violation or repeated violation. A violation that interferes with or adversely impacts the operation of the POTW or sewerage system results in an unannounced inspection and/or sampling of the facility. The City then issues an enforcement action. A follow up meeting and inspection with the facility representative will take place.

8. Latest Adoption of Local Limits

The local limits were last reviewed in 2002. The current local limits were developed by Almer Huntley Jr. & Associates Inc. in 1992 and revised and approved by USEPA in 1995. At that time, studies analysing Maximum Allowable Headworks Loading for chromium, zinc, cyanide, arsenic, cadmium, copper, lead, mercury, nickel and silver were conducted. The results, approved by the EPA in 1994 concluded that local limits for metals were unnecessary. Currently, Gloucester only has local limits for conventional pollutants such as TSS, BOD and Oil & Grease; there are sufficient unassigned BOD and TSS loadings to allow more permitted industrial wastewater discharge should the need arise.
